SUMMARY

Industrial Engineering graduate (GPA 3.94) with four years inside Indomaret Group's bakery supply chain — responsible for sales, distribution, and logistics across 6,500+ retail outlets. Not a software engineer by training: someone who understood the operations deeply enough to know exactly what needed to be built, and resourceful enough to build it. The result: 7 production systems now running daily across 6,500+ stores — demand forecasting, inventory control, IoT monitoring, logistics tracking, and sales intelligence, all built and maintained solo.

WORK EXPERIENCE

Factory Support Jr. Manager

Oct 2024 – Present

Indomaret Group · Jakarta

- Designed and deployed 7 production systems — demand forecasting, inventory control, IoT monitoring, logistics tracking, and sales intelligence — all built and maintained solo, serving 6,500+ stores daily.
- Led a 60-person team across factory operations, sales, logistics, and distribution.
- Automated core workflows: demand forecasting from 4–5 hours of manual work to a fully automated daily run; stock reconciliation from a full day to under 5 minutes.

Acting Factory Support Jr. Manager

Dec 2022 – Sep 2024

Indomaret Group · Jakarta

- Took on full manager responsibilities ahead of formal promotion.
- Delivered the factory's first data infrastructure: Power BI sales dashboards used by leadership daily, and the initial demand forecasting pipeline.

Management Development Program

May 2022 – Nov 2022

Indomaret Group · Jakarta

- Selected into the accelerated leadership track. Rotated through all factory functions — production, sales, logistics, and distribution — building the operational context that became the foundation for every system built since.

Sandwich Program — Academic Exchange

Aug 2021 – Jan 2022

Shibaura Institute of Technology · Japan

- Selected for a semester-long academic exchange — one of a small cohort chosen from the university.

PRODUCTION SYSTEMS BUILT

Seven systems designed, deployed, and maintained solo — all running in daily production at Indomaret Group's bakery division.

- **XGBoost Demand Forecasting:** 3-day sales forecast across 6,500+ stores — 345,011 records per run, fully automated. Replaced 4–5 hours of daily manual forecasting work.
- **Inventory Control System:** End-to-end bakery ERP replacing disconnected Excel files — inventory, costing, work orders, anomaly detection, and reorder planning. Analysis time reduced from a full day to under 5 minutes.
- **IoT Environment Monitor:** Factory air quality monitoring via ESP32 and SHT31 sensors — automated readings replacing manual logbooks across cooling and packing rooms.
- **AutoWeigh:** Legacy industrial scales connected to IoT via RS232 bridge — zero hardware replacement, under Rp 150,000 per node. Real-time weight streaming with anomaly detection.
- **Store Visit Map & Planner:** Mobile-first map for 6,500+ distribution points — five view modes, Held-Karp TSP route optimization, and area-based selection. Replaced daily WhatsApp store lists. Actively used by 10+ sales reps daily.
- **PowerBI Daily Dashboard:** Sales intelligence dashboard used by leadership every morning — competitor benchmarks, regional breakdowns, and trend alerts.
- **Crate Tracking System:** Tracks 9,000–13,000 crates daily across 11 distribution centers. Shortfalls that previously took a full day to investigate are now flagged automatically on import.

EDUCATION

B.E. Industrial Engineering

2018 – 2022

Widya Mandala Catholic University Surabaya

- GPA: 3.94 / 4.00 — Best Academic Achievement Graduate, top of cohort.
- Thesis: *Predicting Tourism Recovery after the COVID-19 Pandemic in Bali — A System Dynamics Approach*

SKILLS AND TOOLS

Analytics & ML:	Python, SQL Server, XGBoost, Power BI, Excel, DAX
Systems & Infra:	React, TypeScript, FastAPI, Supabase, ESP32, RS232, Leaflet.js
Domain:	Supply chain management, demand forecasting, inventory optimization, IoT, retail distribution

HONORS AND AWARDS

- Best Academic Achievement Graduate — Widya Mandala Catholic University Surabaya, 2022
- 1st Place — Statistics Competition (2× winner)
- 2nd Place — Operational Research Competition
