SUMMARY

Industrial Engineering graduate (3.94 GPA) with four years running Indomaret Group's bakery supply chain — sales, distribution, and logistics across 6,500+ retail outlets. Responsible for demand planning, inventory control, and crate logistics for a network that operates every day, at scale. Not a software engineer by training — someone who understood the operations well enough to know exactly what needed to be built, and resourceful enough to make it happen. The result: 7 production systems deployed and running daily across 6,500+ stores.

WORK EXPERIENCE

Indomaret Group | Factory Support Junior Manager | Oct 2024 – Present

- Designed and deployed 7 production systems — demand forecasting, inventory control, IoT monitoring, logistics tracking, and sales intelligence — all built and maintained solo, serving 6,500+ stores daily.
- Led a 60-person team across factory operations, sales, logistics, and distribution.
- Streamlined core workflows: demand forecasting from 4-5 hours of manual work to a fully automated daily run; stock reconciliation from a full day to under 5 minutes.

Indomaret Group | Acting Factory Support Junior Manager | Dec 2022 – Sep 2024

- Took on full manager responsibilities ahead of formal promotion.
- Delivered the factory's data infrastructure, including Power BI sales dashboards adopted by leadership for daily briefings and the initial demand forecasting pipeline.

Indomaret Group | Management Development Program | May 2022 – Nov 2022

- Rotated through all factory functions, including production, sales, logistics, and distribution, building the operational context that became the foundation for every system built since.

Shibaura Institute of Technology | Sandwich Program — Academic Exchange | Aug 2021 – Jan 2022

- Selected for a semester-long academic exchange in Japan as one of a small cohort chosen from the university.

TECHNICAL PROJECTS

- **XGBoost Demand Forecasting:** Manual demand forecasting for 6,500+ stores took 4-5 hours every morning. Built an automated pipeline, 10+ people spent 4-5 hours every morning on manual forecasting. Now under 1 hour for review and sign-off.
- **Inventory Control System:** Period-end reconciliation took a full working day — five Excel files that never agreed. One platform now does it in under 5 minutes. Period analysis ran 3-5 times a week, each taking a full working day. Now under 5 minutes.
- **IoT Environment Monitor:** Cooling and packing room conditions were checked by walking there and writing in a notebook. Sensor network monitors both rooms in real time and generates a 6-step action plan the moment something goes wrong.
- **AutoWeigh:** Industrial scales worked perfectly — but their data only existed on the display. Connected both to a live dashboard without replacing a single piece of hardware. ~13,000 kg weighed daily. Every batch recorded automatically — anomalous weights flagged.
- **Store Visit Map and Planner:** Supervisors compiled a store visit list every morning and sent it via WhatsApp. 10+ reps, 15-25 store visits each per week. Every visit planned on the map — route optimized, store performance visible.
- **PowerBI Daily Dashboard:** Delivered sales intelligence relied on by leadership every morning, featuring competitor benchmarks, regional breakdowns, and trend alerts.
- **Crate Tracking System:** 9,000-13,000 crates shipped daily across 11 distribution centers. Shortage investigations ran 10+ times a month, each requiring a full day of cross-checking across 11 spreadsheets. Now flagged automatically on import.

EDUCATION

Widya Mandala Catholic University Surabaya | Bachelor's Degree in Industrial Engineering | 2018 – 2022

- GPA: 3.94 / 4.00 — Best Academic Achievement Graduate.
- Thesis: Predicting Tourism Recovery after the COVID-19 Pandemic in Bali — A System Dynamics Approach.

SKILLS AND TOOLS

- **Analytics:** Python, SQL Server, SQL Express, PowerShell, XGBoost, Power BI, Excel, DAX.
- **Systems:** React, TypeScript, FastAPI, Supabase, ESP32, RS232, Leaflet.js.
- **Domain:** Bakery supply chain, demand forecasting, inventory management, IoT, retail distribution.

HONORS AND AWARDS

- Best Academic Achievement Graduate — Widya Mandala Catholic University Surabaya, 2022
- 1st Place — Statistics Competition (2× winner)
- 2nd Place — Operational Research Competition
